

Evandro Antônio da Costa de Paula

Caxias do Sul, 95098-520, Brazil, [+55 54 981491193](tel:+5554981491193), eacpaula@outlook.com, [LinkedIn](#), [GitHub](#)

SUMMARY

Versatile Full Stack Software Engineer with over 10 years of experience in developing and optimizing complex web applications. Proven ability to lead technical upgrades, reduce development timelines by up to 50%, and enhance system performance, achieving a 40% increase in critical areas. Expertise in Angular, React, Nest.js, and cloud platforms like AWS and Azure. Adept at architecting component libraries, improving CI/CD pipelines, and ensuring high code quality through comprehensive testing and documentation. Committed to driving innovation and delivering high-impact solutions.

WORK EXPERIENCE

09/2024 – 05/2026	Full Stack Software Engineer Tailwind Business Venture	Caxias do Sul, Brazil
	• Spearheaded a technical upgrade strategy for three large-scale Angular client-side applications within the marketplace. • Orchestrated the first major upgrade from Angular 8 to Angular 18, completing it in approximately three months, followed by the second upgrade in three months and the third in two months, reducing the overall timeline from over a year to eight months. • Assigned to a new operations team to architect and evolve a company-wide Angular component library, collaborating with three senior engineers to define architecture guidelines and standards, provide documentation, and support multiple project teams. • Delivered new features for the component library, enhancing usability, consistency, and design alignment across projects. • Engaged in daily stand-ups for progress updates, blocker identification, and team coordination. • Developed new Angular components, ensuring code quality through Storybook documentation and comprehensive unit test coverage. • Partnered with the Design/UX team to validate component behavior and design expectations. • Participated in sprint reviews to demonstrate deliverables and solicit feedback.	
05/2021 – 09/2024	Software Engineer Tailwind Business Ventures	Caxias do Sul, Brazil
	• Implemented Dependabot across 20+ projects within Azure DevOps CI/CD pipelines, achieving a 100% improvement in package update identification and bolstering security through integration with tools like BlackDuck, Aqua, and Snyk for comprehensive vulnerability assessments. • Pioneered the adoption of Bit.dev Harmony to construct a robust React component library comprising over 65 reusable components, which streamlined development across more than 20 projects and established a foundation for future microfrontend implementations. • Contributed to frontend and backend architecture by integrating linters, formatters, and Git hooks to promote clear structural organization, and implemented hexagonal architecture in Nest.js projects to enhance modularity and maintainability.	

- Maintained code coverage exceeding 95% across 20+ projects, surpassing the minimum 85% requirement and ensuring codebase robustness and long-term stability.
- Authored and maintained comprehensive documentation for REST APIs using Swagger and Postman, improving clarity and facilitating smoother integrations.
- Developed new features and maintained existing codebase.
- Enhanced CI/CD pipelines for improved efficiency and reliability.
- Documented processes, architectures, and API endpoints.
- Evaluated and tested new technologies through Proof of Concepts (POCs).

09/2021 – 04/2022

Sr. Software Engineer

Caxias do Sul, Brazil

OxDreams

- Significantly boosted the performance of the social network's feed logic, which had been experiencing load testing issues, by optimizing SQL queries, restructuring tables, and implementing new indexes, resulting in a 40% performance increase.
- Accelerated the delivery of critical features under tight deadlines for an investor presentation by successfully implementing key functionalities such as like, share, friend search, and follow, despite the React Native app's initial structural challenges, thus securing continued investment.
- Contributed to the development of new features, maintenance, and performance improvements for the private social network of the OxDreams startup.
- Developed new features and maintained the codebase.
- Optimized database queries and application performance.
- Collaborated on urgent feature adjustments to meet critical deadlines.
- Mentored junior developers.

06/2021 – 09/2021

Full Stack Developer - Freelancer

Caxias do Sul, Brazil

LogicTake

- Successfully delivered all required functionalities within established deadlines for the temporary life insurance platform, Parachut360, meeting the project's time-sensitive demands.
- Maintained and enhanced existing features for the Parachut360 platform.
- Identified and fixed bugs.
- Developed new user interface flows.
- Validated data against documented business rules.

01/2020 – 01/2021

Sr. FullStack Developer

Caxias do Sul, Brazil

FullSoft

- Achieved the platform's reconstruction deadline, with core features fully rebuilt within 10 months, enabling the commencement of the final two months of user acceptance testing (UAT) during the pandemic, leading to a successful release.
- Introduced new development processes incorporating emerging technologies such as React.js, which was novel to the company, demonstrating a simpler, more functional paradigm that prompted the gradual migration of other solutions within the organization.
- Conducted interviews with external clients and internal developers to define features, considering various tool versions used by clients.
- Identified and built new modules.
- Documented the new application.
- Conducted comprehensive tests.
- Generated binaries for UAT using packaging tools like pkg and Electron.

01/2019 – 01/2020

Sr. FullStack Developer

Caxias do Sul, Brazil

Saga Sistemas

- Enhanced architecture in PHP Laravel base projects by optimizing the utilization of framework features that were previously underutilized in the existing codebase.
- Architected a strategic shift for portal customization by refining the use of branches and tags in Git for releases. Analyzed and unified client-specific versions into a single 'base' project with a main branch, enabling forks to receive tailored customizations. This eliminated 100% of the replication effort for new features across clients, streamlining the update process.
- Spearheaded a technology renewal initiative by provisioning a clean, modern architecture for a new project, aligning with market trends and introducing React.js as the new front-end for the base project.
- Created a base project for new clients.
- Customized existing features according to client-specific business rules.
- Developed new features and modules.
- Authored PL/SQL queries for integration into new modules.
- Identified and rectified bugs.
- Provided support to portal clients.

01/2018 – 12/2018

FullStack Developer
FDD

Caxias do Sul, Brazil

- Optimized application performance by identifying and resolving bottlenecks in the software architecture, significantly improving overall efficiency through debugging and performance analysis of Angular.js components using Google Chrome DevTools.
- Successfully developed and delivered an MVP for Iconic, incorporating basic blockchain integrations and utilizing CodeIgniter, completing the project in record time and earning significant recognition for the squad.
- Maintained and developed new features.
- Performed system analysis and troubleshooting.
- Integrated and enhanced APIs.
- Conducted code reviews, debugging, and issue resolution.
- Executed front-end development and UI/UX improvements.

01/2016 – 12/2017

Backend Developer
AxysWeb

Caxias do Sul, Brazil

- Efficiently developed a new project model during the launch of .NET Core for a client in the gas station network industry, promoting the adoption of new technologies and proposing an architecture that transitioned from a monolithic structure to a more efficient RESTful API, thereby improving performance indices.
- Successfully integrated third-party APIs and enhanced SQL queries for improved data management and performance across various web platforms.
- Maintained and developed new features for legacy systems.
- Performed system analysis and troubleshooting.
- Designed, integrated, and enhanced APIs.
- Conducted code reviews, debugging, and issue resolution.
- Contributed to front-end development and UI/UX improvements.
- Actively participated in sprint planning, daily stand-ups, and backlog grooming sessions.

EDUCATION

09/2019 – 07/2022

FTEC
Software Analysis and Development

Caxias do Sul, RS, Brazil

SKILLS	Javascript	Typescript
	React.JS	Angular
	Next.JS	Nest.JS
	C#	PHP
	Python	Docker
	AWS	Azure
	Git	Scrum
